Erp, 1 July 2026

Subject: Blackberry plants 2026-2027

Declaration to Global GAP

The plants supplied to you comply with the requirements specified in Directive 93/62/EG relating to the sale of propagation material and young plants for vegetable crops, with the exception of seeds, as laid down in the inspection rules of the NAK-Tuinbouw (Netherlands Inspection Service for Horticulture). Compliance with these requirements is monitored by the NAK-Tuinbouw inspectors.

With every delivery, a plant passport or health certificate is included with the plant material. In connection with monitoring compliance with the Global GAP requirements, it is important for the grower to retain these documents. The supplier has registered the crop protectors used; evidence of this is available on request.

Underneath you can find an overview from the chemicals we have used in the plant growing year 2026:

Mavrik	Captosan 500 SC	Karate next
Milbeknock	Frutogard	
Scelta	Switch	
Decis Protech	Proplant	
Axidor	Soriale	

Yours sincerely,

Van den Elzen Plants BV
